

## **Symposium on Measuring Inequality in the 21st Century**

HDRO Offices

304 E 45<sup>th</sup> St, FF-11<sup>th</sup> Floor, New York

**Thursday 28 March and Friday 29 March 2019**

### **Context and Vision**

---

During 2019 the discussion about inequality will be central in the global stage. The theme of the ‘Super’ High Level Political Forum “Empowering people and ensuring inclusiveness and equality” and the “Human Development Report 2019: Tackling Inequalities in the 21st Century” (among other initiatives), open the space to move the frontiers in the field building a forward-looking agenda. This is a precious opportunity to take stock of our collective knowledge about inequality, identifying where the gaps are in its concept and measurement, what are the main innovations in methodology and data collection to overcome those gaps, and what are the actions that should be promoted among UN Member States, policy makers, academics and global data providers/aggregators. This is also urgent in a context of disconnect between public concern about inequality and its destabilizing effects, and the data coming from traditional inequality indicators.

The Human Development Report Office, LIS, the Stone Center, UNU-WIDER, and the World Inequality Lab are joining forces to host a Symposium on Measuring Inequality in the 21st Century. The Symposium will revisit the frontier debate on inequality measurement to generate a basic consensus on the issues and priorities to guide policy makers, inform intergovernmental consultations regarding the state of measures of inequality in the world, and push a collaborative agenda to refine concepts, data and methodological approaches on inequality.

There is need for this conversation. From the point of view of countries --in particular for those with limited resources and statistical capacities--, it is important to find a common narrative among global experts and supra-national institutions to frame their new efforts in data collection and monitoring. This common narrative should be able to push for steady progress, while accommodating innovation in methodologies and concepts, open discussion of alternative options, experimentation, and learning.
